

## Shell Assignment 2

1. List below a shell script which will type out the message 'hello world'.
2. List below a shell script which will assign a value of 6 to a variable called "total" and then print out the following message 'the value of total is 6'.
3. Get the shell to print out today's date included in the message starting with a 'today is ...'
4. Write a shell script called 'demo' to print out any command line arguments which you include in the same line when you start demo.
